

DEMETER

Biodynamic agriculture

Shaping the future

Demeter International is the **largest certification organization** for **biodynamic agriculture**.

Biodynamic Agriculture is a holistic approach to agriculture in which **vitality is the priority**.

Demeter's vision is to **heal the planet** through agriculture. It works to **feed the land, respect the living** and the soil and strengthen its life and **plant health**.

It is an **equilibrium agriculture**.

HISTORY AND PARTICULARITIES OF DEMETER

Since its introduction in 1928, the Demeter certification has stood for proven quality from production through processing to trade.

The use of botanical raw materials with Demeter certification guarantees that they are cultivated from the highest possible quality, far strict than any organic label.

In addition to the omission of synthetic fertilizers and chemical pesticides, or artificial additives in further processing, it also includes the principles of the Biodynamic agriculture: working with the vital energies in nature, restoring and supporting natural cycles and interrelationships and taking in consideration the cosmic rhythms in plant production.

*On its continuous commitment to natural and safe products, COBIOSA is manufacturing the new active ingredient **COBIOPURE**, with Moringa leaves cultivated with **DEMETER** certification.*

Organic

- ✓ No endocrine disrupting compounds.
- ✓ No pesticides, herbicides, artificial fertilizers, synthetic chemicals, growth promoters, hormones or GMOs

Biodynamic

- ✓ No endocrine disrupting compounds
- ✓ No pesticides, herbicides, artificial fertilizers, synthetic chemicals, growth promoters, hormones or GMOs
- ✓ Holistic approach as animals, plants and solar system are all connected.
- ✓ Follow complex stellar calendars as astrological influences affect phases of planting and harvest.
- ✓ Enrich the soil through minerals and herbs that enhance the compost applied and intensify sunlight permeation
